Offshore wind a crucial driver in  
Japan's transition to net zero by  
2050

# Japanese offshore wind market holds the key to a decarbonized society

## Four Key elements to keep momentum

### Commitment

- Industry predictability through clear long term Offshore targets backed by roadmaps to deliver supporting infrastructure (ports ,grid and transparent technical certification)
- Government coordination with stakeholders to secure the project size and schedule

### Auction simplicity

- Scale up project sizes and provide clear pipeline of competitive action schedules
- Fully centralized auction system and transparent and objective qualitative criteria
- Central Government offshore zoning through detailed Marine Spatial Planning

### Focus

- Realistic goals and support for building regionally competitive supply chains
- Focus on specialized supply chain capabilities that can be scaled up over time
- Chose partners with care and relevant industry experience will be crucial

### Revenue stability

- Ensure competitive projects make it to market
- Introduce inflation adjustment schemes trough proper indexation to respond to unforeseen changes in market conditions
- Foster a positive environment for CPPAs
